

APIs to use:

- Google cloud vision <https://cloud.google.com/vision/docs/>
- Food2fork <https://food2fork.com/about/api>

Site Map:

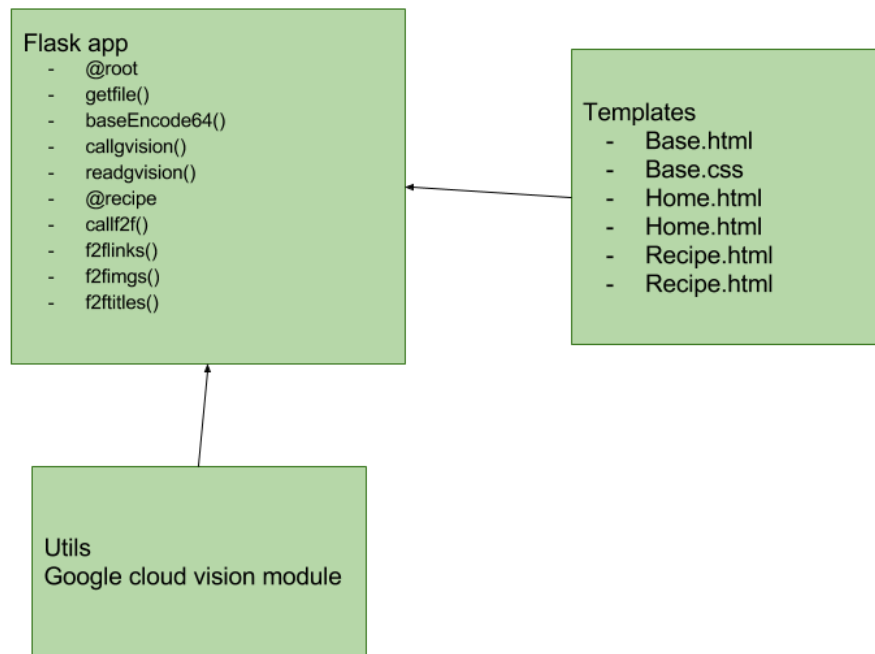

- Homepage
 - Includes a small description on the project
 - Includes photo specification to get best image detection of food
 - Allow users to input a image file using by choosing a file from their computer
- Recipe Page
 - Includes the name of the food that was predicted (using Google cloud vision api)
 - Lists an image of a recipe (using food2fork api)
 - Lists links to various recipes (using food2fork api)

Components:

- Flask app
 - @root
 - getfile()
 - baseEncode64()
 - callgvision()
 - readgvision()
 - @recipe
 - callf2f()
 - f2flinks()
 - f2fimgs()
 - f2ftitles()
- Templates
 - Base.html
 - Base.css
 - Home.html
 - Home.css
 - Recipe.html
 - Recipe.css
- Utils -- possibly
 - Google cloud vision module (needed to use api, created by Google)

Relationship between Components:

Assignment:

PM: Jackie Woo

- Flask app
 - @root: returns homepage template **ALEX**
 - getfile(): returns img file **XAVIER**
 - baseEncode64(): encodes img file **XAVIER**
 - callgvision(): makes google vision api call, returns json **XAVIER**
 - readgvision(): returns string of what google vision predicted **XAVIER**
 - @recipe: returns recipe template **ALEX**
 - callf2f(): makes food2fork api call, returns json **ANGEL**
 - f2flinks(): returns list of links to recipes **ANGEL**
 - f2fimgs(): returns list of img links corresponding to recipes **ANGEL**
 - f2ftitles(): returns list of titles of recipes **ANGEL**
- Templates
 - Base.html **JACKIE**
 - Base.css **JACKIE**
 - Home.html **ALEX**
 - Home.css **JACKIE**
 - Recipe.html **ALEX**
 - Recipe.css **JACKIE**
